Source is developing a unique experience for the petroleum equipment industry. Within our facility in Arlington, Texas, we are building a replica of a fuel site, complete with underground storage tanks, submersible pumps, variations of piping and sump fittings, underground dispenser and spill containment, dispensers, hanging hardware, electronic monitoring systems — the works! And to serve the entire country, we are devoting half of the exhibit to a site typical for most of the U.S., with the other half devoted to the more specific requirements of a site following California regulations.

FROM SKETCH >> TO SOLUTION

The **Source SOLUTIONS Design Group** provides a value-added design service that is unmatched within the petroleum equipment industry. With their expertise, the training center of Source University is being developed into a reality. To learn more about the SOLUTIONS Design Group, please go to sourcena.com.

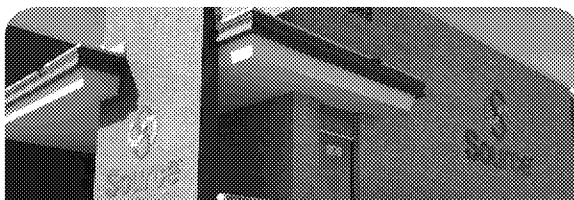

Extensive Expertise

Valuable Visualizations

Operations Optimization

Supportive Services

Arlington Campus

This project will be in a constant state of improvement as new regulations and equipment are introduced. And there will be a classroom adjoining the center, for training, instruction and for you to hold seminars, led by us or by your own team. We are excited to introduce the training center concept to you, and we look forward to your visit.
